

Web Query Tool (Web QT)

GM Lead User Group

April 14, 2004

Agenda

- What is Web QT?
- What will it replace?
- Upcoming releases
- Demo of Web QT
- Comments and Questions

What is Web QT?

- Designed to provide operational support by offering a simple and intuitive method for running queries
- Runs against the OLTP Production Database
- Provides users with many key features including: ability to maintain queries, documentation output, and exporting data to MS Excel
- External version of Web QT will be deployed to the Commons (later in 2004)

What eRA applications will Web QT replace?

- Web QT will replace client/server apps: Quickview, ICSTORE, and Crisp Plus.
- This will give users the benefit of having **one** query tool v.s. **many** query tools
- eRA will not retire any of the applications until all functionality for that application is migrated to Web QT
- eRA will work closely with user community on retirement of client/server applications

Upcoming Releases

June 2004

- Ability to query on PI only – *will add PI last name as required field*
- Increase number of hitlist rows – *will increase default to 50 rows*
- Modify Abstract header- *will add Project Title and Institution Name*
- Add ability to sort by Application Status code within hitlist
- Increase merge limit on abstracts and resumes – *will increase to 500*
- End Pilot – *fully deploy Web QT and begin thinking about retiring Quickview*
- Fix several defects/bugs

July 2004

- Ability to perform a range search on numeric fields and date fields
- Wildcard search in RFA/PA field

Future Release

- Deploy external version of Web QT to Commons
- Add Maintain Layouts functionality – *will give user the ability to customize and save hitlist layouts*

About Web Query Tool

The Web Query Tool (Web QT) is designed to provide operational support by offering a simple and intuitive method for running queries against the eRA on-line transaction processing (OLTP) production database. Web QT will eventually replace eRA Oracle-forms based tools, such as Quickview, ICSTORE, and later, CRISP Plus. Web QT provides users with many key features including: ability to maintain queries and hitlist layouts, documentation output, exporting data to MS Excel, and a choice of system viewing options (basic or expanded view).
